

Manual Central Filters

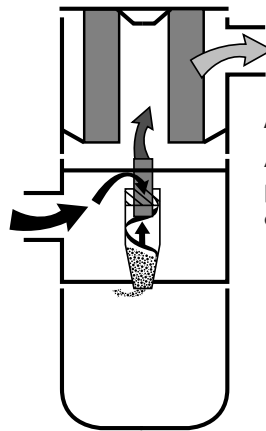

Manual filters are used to remove dust from vacuum system convey air prior to passing through the positive displacement blower. Advanced Bulk and Conveying, Inc., supplies the filter on a free-standing frame for floor mounting or with mounting bands for various remote mount installations. When ordering, specify the airline size and configuration of the inlet and outlet (straight or 90 degree elbow).

Model SBG-16

Shown on free-standing frame.

Airflow Pattern

Air in the side, through the pre-cleaner, then out the end of the air cleaner (upper) portion.
