

Railcar Unloading Systems

ADVANCED
BULK & CONVEYING

Delivery of plastic resin material by bulk railcar offers significant savings over alternate methods. Recovery of investment is made quickly and the savings on material soon adds to your financial bottom line. Advanced Bulk and Conveying, Inc., has the quality equipment that you want and the experience that you need to build the system best suited to your operation.

Each customer has their own special requirements for material convey rates and storage capacities. We design and build each system from standard components combined specifically to achieve the results that you require. Your needs will determine whether a vacuum batch, continuous vacuum or pull/push system is best in your application.

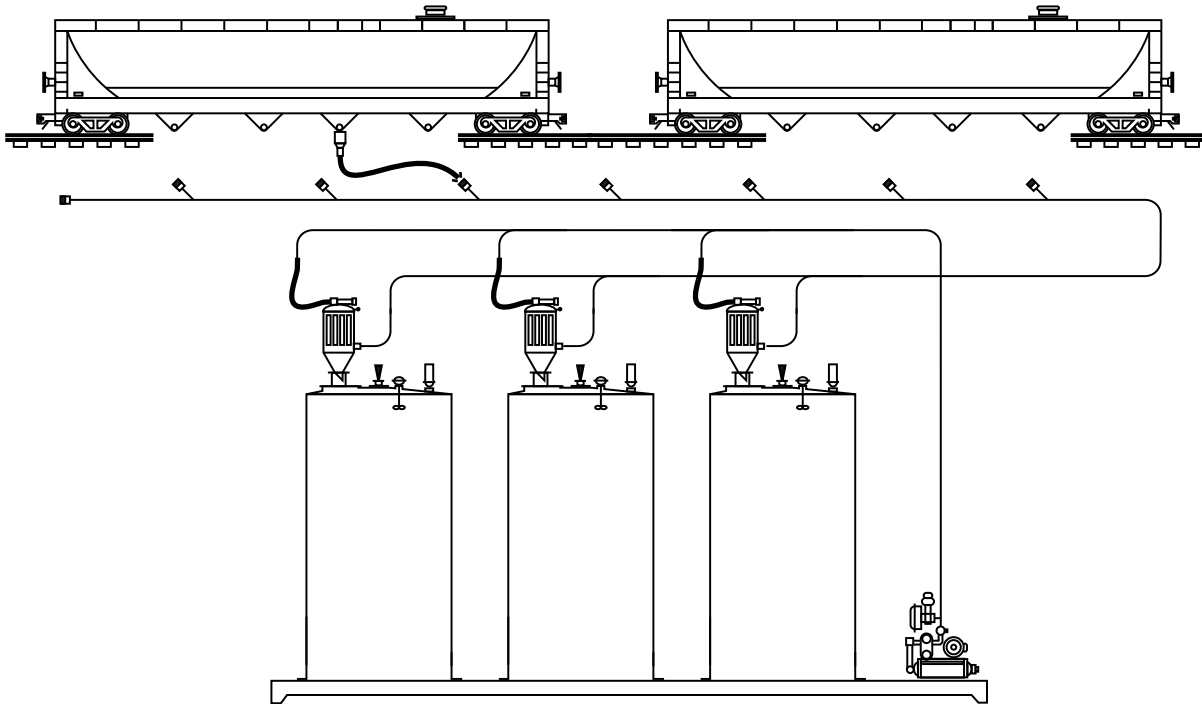

Railcar Unloader Vacuum Loader Unit

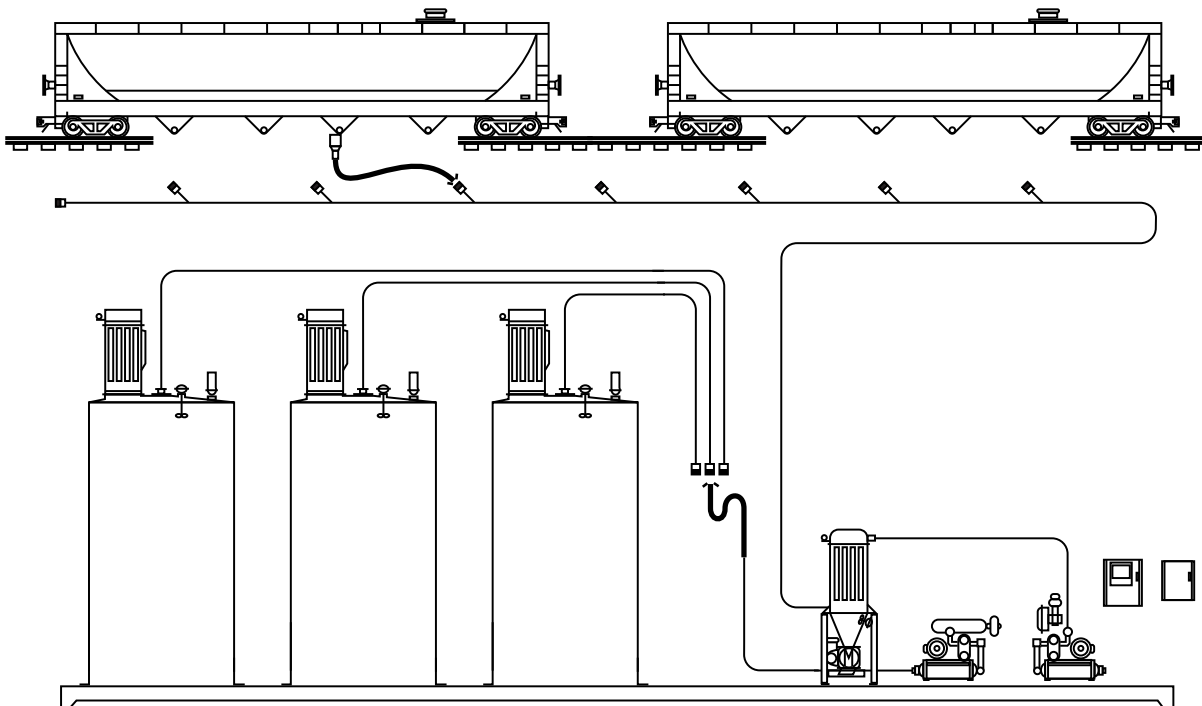

Railcar Unloader Pressure Blower Unit

Railcar Unloading Systems (continued)

Vacuum Batch Railcar Unloading System

Typical for lower convey rate pellet materials.

Pull/Push Railcar Unloading System

Typical for higher convey rate pellet and powder materials.
